

Meet Klimber 3 P, the ultralight glider born to compete

A racing wing within reach of all pilots

From **2.85 kg**, ultralight and high performing

Easy to use – especially for difficult launches and landings

Spain, 22nd of March 2023. – Niviuk Paragliders presents the third generation of the Klimber. We keep improving our **P series two-liner EN/LTF D**. From 2.85 kg, it is super compact, ultralight and high performance. We put all our knowledge, technologies and experience at the service of pilots who want to achieve the best results in hike & fly and cross-country paragliding. With a competitive character, it has been designed for the X-Alps.

XC, Hike and fly & competitions

The Klimber 3 P is the perfect partner for mountain lovers. Ideal for experienced pilots looking to reach higher peaks and cover long distances with an ultralight glider. A high-performance machine, perfect for complicated launches and landings. The wing stays solid and efficient, even in turbulent air. It is our P Series racing model par excellence. Go big distances with a paraglider that has evolved in terms of glide and thermal performance. The use of Nitinol allows a more compact and practical packing for those multi-day adventures.

Ultralight and high performance

Based on the design of the Peak 6, the Klimber 3 P is higher performing and faster. A new distribution of the Nitinol reinforcements makes it more stable. It is the perfect tool for all pilots who want to push their limits. Its super light and compact characteristics remain the same, while its internal structure has evolved to improve its performance.

Greater brake travel range

The brake travel range has been increased by 25% compared to the previous version, increasing the passive safety of the glider. This makes the wing much easier to fly at low speeds and easier to launch and land in difficult conditions. Maximum control and efficiency in all phases of flight, especially take-off and landing.

More stable

The Klimber 3 P design improvements have considerably reduced the pitch and roll movement. Thanks to Niviuk technologies and a new airfoil, the glider is much more stable above the pilot and more efficient in flight.

Maximum efficiency

With a higher glide ratio and increased top speed, it is a perfectly efficient machine. Its high performance in thermals and glide is complemented by its exceptional maneuverability.

New cut, stitching and materials

The application of mini-ribs on the trailing edge reduces drag and improves the aerodynamic shape of the wing. The DRS technology has been optimised: The mini ribs are integrated directly into the cut of the outer panels with the result that the outer seams disappear. New improved materials have been applied: A new fabric, Dodko 25 g/m², on the outside of the wing to make it lighter. Skytex 27gr throughout the internal structure to ensure strength and lightness. A new waterproof coating (Edelrid Magic Pro Dry) has been used on the lines to make pre-flight preparation simpler.

Improved handling

- **New Ergo P Series handles:** New risers incorporating a new, smaller and lighter Ergo handle, specially designed for this P Series wing. This allows the pilot more comfortable and efficient control thanks to direct steering on the B-risers.
- **Better speed system:** A locking system eases the use of the speed-bar and reduces the amount of travel the pilot has to push to reach full bar.

Road to X-Alps 2023

Our **Klimber 3 P** paraglider, together with the **Arrow P Race** harness and the **Expe Race** backpack make up the flying equipment selected for this year competition. Based on all our know-how in the development of the P Series range, it is an ultra-light flying equipment weighing **around 4.5 kg**.

Latest developments: all info available online

You can find out all the details of the latest products we have launched. All the information has been published on our website:

- First tandem speed wing, [Bi Roller 2](#) (EN 926-1)
- New paramotor tandem wing, [R-Bus 2](#) (DGAC/EN 926-1)
- First EN C two-liner, the [Artik Race](#)
- New EN D two-liner, the [Peak 6](#)
- New acro wing, [N-Gravity 6](#) (EN 926-1)
- New speed wing, [Roller 2](#) (EN 926-1)

ABOUT NIVIUK

Since 2005, Niviuk Paragliders has been designing and producing paragliders with character, taking the experience of flying to a higher level and aiming to achieve maximum satisfaction for the pilot. Its founders, who collectively have more than 90 years of experience in the sector, are committed to technological innovation, connection to the customer, the possibility of having extraordinary adventures. Always going 'Beyond the Glide'.

Niviuk is a multi-national company with its headquarters and logistics division in Spain. Part of its R&D department and its test pilots are located in the Swiss Alps, and since 2016, it has had its own 6,500 m² production facility in Vietnam, where it manufactures its products and applies techniques with minimal environmental impact that guarantee sustainability. With more than 300 employees, it is positioned at the top of its sector, has a commercial presence in more than 80 countries and a large network of professional pilots all over the world.
